CONSTANTLY INNOVATING AND EVOLVING

TUBES

Low carbon welded steel tubes for industrial and structural uses, welded by induction with 'state of the art technology', made from **SAE1010** and **SAE1020** steel, as well mechanical properties upon feasibility analysis.

Soufer welded steel tubes have a wide range of applications from the furniture industry, automotive, civil construction to agricultural and road implementations. They are made from cold rolled steel coils, hot rolled steel coils, and HDG steel coils with metalized welded beads.

Soufer is also capable of supplying tubes with the inner side burr free and "eddy current" (eletromag test non destructive), with standardized or customized lengths, always following the standards **ASTM-A513/DIN-2394**.
